EDUCATION

Thakur College of Engineering & Technology (TCET), Mumbai, India
Bachelor of Computer Applications (BCA), Computer Engineering

Oct 2024 – May 2027

TECHNICAL SKILLS

Languages: JavaScript, Python, Java, C++

Developer Tools: Git, GitHub, VS Code

Concepts: Object-Oriented Programming, Data Structures, REST APIs, JSON Schema Design, Version Control, Debugging, Backend Development

Exposure: Node.js, React (certified), Android System Internals (custom ROMs, TWRP, Fast boot)

EXPERIENCE

Software Development Intern — Winter | TCET, Mumbai

Jan 2026 – Feb 2026

- Implemented Java programs covering core OOP principles — inheritance, polymorphism, encapsulation — as part of structured engineering exercises with emphasis on real-world applicability.
- Debugged program logic across multiple modules by tracing execution flow and isolating failure points, improving code correctness and readability.
- Practiced writing structured, maintainable Java code following clean-code conventions; documented program behaviour to support future extensibility.

Head of Research, Zephyr 2025 | TCET, Mumbai

Aug 2025 – Oct 2025

- Owned research and content management lifecycle for 20+ events in TCET's annual technical fest; defined data collection standards adopted across 5 coordinating teams.
- Designed and maintained structured JSON schemas for event listings including title, pricing, registration metadata, and media fields integrated directly into the fest's production website.

Event Data & Content Coordinator, Zephyr 2K25 | TCET, Mumbai

Aug 2025 – Oct 2025

- Built and validated JSON data pipelines for multi-event digital publishing; coordinated with web team to automate content ingestion and enforce schema consistency.
- Maintained single source-of-truth for event metadata across CMS and website, eliminating duplicate entries and reducing manual correction overhead during publishing.

Software Development Intern — Summer | TCET, Mumbai

Apr 2025 – May 2025

- Developed foundational C++ programs implementing algorithmic logic — sorting, recursion, pointer manipulation — under structured problem-solving curriculum.
- Applied OOP design patterns to decompose problems into reusable class structures; analysed program flow and edge-case behaviour through iterative debugging.

PROJECTS

Android System Customization & ROM Engineering

2024 – Present

Tools: Fastboot, ADB, TWRP, Magisk, custom ROM toolchains

- Flashed and configured custom Android ROMs (LineageOS, AOSP-based) on physical devices; resolved boot loop and partition mount failures by analysing logcat output and editing fstab configurations.
- Managed recovery partitions using TWRP; performed full system backups, dirty flashes, and Magisk root installations — developing practical understanding of Android boot sequence and system partition layout.
- Diagnosed kernel-level issues and driver incompatibilities by cross-referencing dmesg logs and community-maintained device trees, consistently restoring device functionality from hard-brick states.

Structured Event Data System — Zephyr 2K25

Aug 2025 – Oct 2025

Tools: JSON, Git, GitHub, content management workflows

- Designed a scalable JSON schema to represent heterogeneous event types (technical, cultural, workshops) with consistent field definitions for title, category, pricing tiers, coordinators, and media.
- Collaborated with the website engineering team via Git-based workflows to deliver structured data that fed directly into the production CMS; maintained version history for all schema revisions.
